

Windows Taskbar Live Preview – FAQ

What is Windows Taskbar Live Preview?

This helpful Windows feature shows you a live preview of any open window.

How should I use Live Preview?

When you're working in multiple windows in QuickBooks, each has its own icon on the Taskbar. To quickly find the window you're looking for, just place your mouse pointer over any Taskbar icon.

I don't see any preview! What can I do?

You're probably using a basic Windows theme. You need to use an Aero theme to enable Live Preview.

To switch to an Aero theme

1. Open the Windows Control Panel by clicking the Start button and clicking Control Panel.
2. Click Appearance and Personalization.
3. Click Personalization.
4. In the Aero Themes section, select a theme.
5. Close the Control Panel.
